

NATIONAL MAGNATES  
PLAN WARM MEETING

Effort Will Be Made to Legislate  
"Cash" Out of Figuring in Major  
Pentagonal Races.

DREYFUSS HAS A REMEDY  
World Prohibit Sale of Player After  
June 15. Owners Have Scrap  
All of Their Own.

National league followers have  
another fight in prospect now when  
the barons of the senior organization  
concerned—Harry Hermann, of  
the Indians, and Charles Ebbets,  
of the Brooklyn Dodgers—are going  
at it again because Ebbets' stra-  
tegic maneuvering and Hi Meyers  
rest from the Dodgers. Of course,  
Ebbets remains the charge, but  
experts declare he has proof and  
will preserve it until the magnates  
will come forth with a full exposé and will suggest a  
trial when he will come forth with  
all his proofs.

This year of all recent years,  
seems to be the pavior for inter-  
national leagues. Every magnate in  
the National League has made one  
or more charges against other clubs  
in connection with players, so that  
when the subject is brought forth  
in the annual meeting there should  
be something unusual doing.

Barney Dreyfuss, of the Pirates,  
seems to be not going to wait for  
any of his associates in the Heydey  
era to bring the matter to a  
head, but he deserves credit for already  
making some suggestions that will  
not be far off the mark.

In the beginning of his great task  
Belgium's most urgent need is for  
commercial and industrial credits  
which will enable manufacturers  
promptly to restore and equip their  
devastated plants and purchase raw  
materials.

In view of the relatively small na-  
tional debt, Belgium is in a favorable  
position in bidding for credit abroad.  
Moreover, the indemnities should  
ultimately more than offset the  
entire war debt.

Belgium's record of superior  
moral and industrial attainments  
in the past is her surest guarantee  
for the future. It is the most densely  
populated country in the world,  
having an area of 11,273 square  
miles, somewhat larger than Ver-  
mont, and about one-third the size of  
Michigan. Belgium reported a well dif-  
fused comfort a population of more  
than 7,500,000 in 1914. An excess of  
immigration over emigration in re-  
cent years indicates that an average  
density of more than 650 inhabitants  
per square mile has not produced  
undue pressure upon the country's  
resources. The kingdom stands eighth  
in the world in its rank according to  
aggregate wealth, and sixth  
according to total foreign trade and  
in commerce per capita was sur-  
passed only by the Netherlands.

Belgium's prosperity and its high  
rank among the industrial nations  
before the war had an especially  
sound basis in the country's highly  
developed agriculture. About three-  
fourths of the total area was under  
cultivation. The average value of  
the produce per acre was approxi-  
mately \$100, a yield equalled by no  
other country.

Although Belgium sold consider-  
able quantities of foodstuffs abroad,  
the country is not self-supporting as  
regards food. The imports of liquors  
and tobacco have regularly ex-  
ceeded the total imports in 1914 by  
\$132,000,000. Nevertheless, Belgium  
had about 10,000 families  
in the colony, but are not  
permitted to occupy their own brick  
houses. Mexican families are living  
in them and refuse to quit, pro-  
claiming the doctrine of "Mexico for  
Mexicans."

An important key to a nation's in-

dustry is its coal supply. Little Belgian's  
domestic coal has come from the  
southern fields, which, with a single  
exception of about four miles, ex-  
tend across the kingdom. For some  
years before the war the output aver-  
aged about 13,000,000 tons, and until  
1909 Belgium exported an excess  
of coal. Since 1910, however,  
the increased domestic consumption  
and, principally, to meet the rapid  
growth of the industries has brought  
about a reversal of trade conditions.  
The discovery of two new coal fields,  
one adjacent to the Netherlands bor-  
der and the other in the southern  
part of the kingdom, promises to re-  
duce the necessity for reliance upon  
imported coal in the near future.

Along with the coal fields, the  
mines in the colony are rich depo-  
sits of iron ore but owing in part  
to legal restrictions governing the  
extraction of these deposits the pro-  
duction of ore has been small for a  
long time. Nevertheless, Belgium's  
blast furnaces produced in 1912  
chiefly from Luxembourg ores, 2,390,  
000 tons of pig iron. This output of

iron was reflected in the country's  
prosperous steel industry.

In keeping with the development  
of the iron and steel industry, there  
has been a significant expansion of  
various related lines of manufac-  
turing, especially machine and en-  
gine works and the construction of  
railway equipment and automobiles.  
These last mentioned, along with  
textile industries, are among the  
other more important enterprises.

The total mileage of the Belgian  
railways in 1912 was 2,939—2,928  
miles of standard gauge roads and  
2,473 miles of light or meter gauge  
roads. This was an average of 47.5  
miles of line for each square mile of  
territory, the greatest railroad  
density as a whole in Europe.

The Belgians have for a long time  
held a prominent position in interna-  
tional finance, the estimated volume  
of foreign investments in 1911 being  
\$40,000,000. Belgian capital is

found in a great variety of enter-

prises almost all over the world.

In the Belgian Congo there is an  
area which will be of increasing  
importance in the future develop-  
ment of Belgium's industries. In  
area the colony is 80 times as large  
as Belgium itself. Although situated  
in equatorial Africa, its climate is on  
the whole much more salubrious  
than that of most tropical countries,  
because the greater part of the coun-  
try is a comparatively high plateau.  
The population of the colony is vari-  
ously estimated at from 10,000,000  
to 15,000,000.

Since the annexation of the Congo  
by Belgium in 1908 industrial enter-

prise there has been concerned  
chiefly with preparation for a com-  
prehensive and well rounded devel-  
opment of the colony through the  
exploitation of its resources—agri-  
cultural, forest and mineral.

Many other Mormons, disheart-  
ened by their reversals have begun  
to move in the United States. Ap-  
peals have been made to the Mex-  
ican government by the Mormons  
to remain. Recently the Ameri-  
can state department asked the Mex-  
ican government to drive out the  
Mormons who have usurped their property  
and homes. The colonists hope this  
will be successful.

BLONDE WITH SUNNY  
DISPOSITION SEEKS MATE

WAKEFIELD, Mass., Aug. 23.—Sister  
Mabel H. Corey of Al-  
bion, who described herself  
as a blonde with money and a  
sunny disposition, and asked the  
members of the Board of Selectmen of Wakefield to find her a husband,  
now has a list of seven eligible  
men for consideration.

Some of the contestants conceded  
the fact that they lack the necessary  
qualifications to make her happy, although  
Corey, Miss Corey has money of  
her own.

Two of the would-be spouses ad-  
mitted that they were financially  
independent and a third declared  
that he was not of a job. Another  
was from a man who described  
himself as 45 years old, and who said  
he all his life he had been looking  
for a wife just like Miss Corey  
and had made for him.

Still another of the suitors sent his  
application on a postcard.

Three of the letters received were  
addressed to Miss Corey, care of the  
Postmaster.

MACHINE-MADE MONEY  
BUT IT WAS NO GOOD

CLINTON, Ind., Aug. 23.—Just  
because a "money machine" for  
which he paid \$700 was "no good,"  
Ed Baldwin, a Rumanian, called  
upon the police to pursue two elop-  
ing strangers who hastened away  
from the making the sale. The "ma-  
chine," which resembled a telegraph  
sparkler, could turn out a sheet of  
paper resembling currency, the po-  
lice said.

The Irish Lead Assn.

We know that the Irish have  
the upper hand in the fight game  
again. Yes, sir, once again. There  
was a time years ago when the Ger-  
mans had Wolfgang and Papke helping  
them, and later the Hebrews,  
John Lewis, Leonard, Attell and Al  
Metzger, in the races, but it's all  
changed now. The Irish are the  
leaders now. We have Johnny  
Kilbane, featherweight champion;  
Sam Britton, welterweight champion;  
Mike O'Dowd, middleweight  
champion; Jack Dempsey, heavy-  
weight champion. We almost had  
the Larch, bantamweight champ,  
but he sort of stopped him.

Pigeons Carry Letters

JACKSON CITY, Kan., Aug. 23.—A large number of carrier pigeons  
from various business men in town  
were sent to Junction City  
yesterday morning, where the birds were  
released. The birds made the hurry  
trip to camp, where the letters were  
deposited and brought by carrier to  
the city where they were delivered.

## REAL BUFFALO MEAT SERVED MOVIE STARS

Actors Engage in Filming Story of  
Oklahoma at 101 Ranch Eat  
Their Victims

Special to The World

TULSA CITY, Okla., Aug. 12.—Buffalo meat is one of the chief and also choice dishes being served to 55 people from the Fox film studios of Los Angeles, who are engaged in filming a feature picture that tells of Oklahoma and her remarkable story. A buffalo was killed yesterday and another today on the 101 Ranch, where the picture is being filmed. In one of the scenes the heroine is rescued from the stampeding buffaloes by Tom D. Morris, star who is featuring in this play, and he killed both the animals in making the rescue.

Hundreds of people are going to the ranch daily to see the screen pep-  
pings and arrangements are being  
made for an immense crowd to-  
morrow. Mix has agreed with the  
church people of Elgin, near the  
ranch, that all the money taken in  
Sunday at 50 cents admission will be  
turned over to them for a new church  
building.
